-!- FUNCTION: PROBABLE KINASE THAT MAY BE INVOLVED IN A CALCIUM-SIGNALING PATHWAY CONTROLING NEURONAL MIGRATION IN THE DEVELOPING BRAIN. MAY ALSO PARTICIPATE IN FUNCTIONS OF THE MATURE NERVOUS
      VII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Event-Alternative splicing; Named isoforms=4;
Comment-Additional isoforms seem to exist. Type A (AS and AL) and type B (BS and BL) isoforms differ respectively by the presence or absence of the doublecortin domain. An alternative splicing occurring in 3' of the mRNA produces the long (L) instead of the short (S) isoforms;
                                                                                                                                                                                                                                                                                                                                                                   TISSUE=Fetal brain;

(HK), that has homology to members of the calcium/calmodulin-dependent protein kinase kinase subfamily. The mechanism of action of the protein of the invention is that of a kinase modulator. The human kinase of the invention is useful for creating a pharmaceutical composition for treating a disease or condition mediated by the human kinase. HK is also useful to provide a target for diagnosing a disease or predisposition to disease mediated by HK, and is also useful in pharmacogenic analysis. HK is useful for treating a disorder characterised by absence of inappropriate or unwanted expression of HK, also as an immunogen to raise antibodies by administering HK to a mammalian organism e.g. rat. rabbit or mouse. Nucleic acids of the invention are useful as hybridisation contibodies for mRM, transcript/companion of the invention are useful as hybridisation expressing a native HK are useful for assaying compounds that stimulate or inhibit HK function. Nucleic acids of the invention are also useful for preducing transcript/cDNA and genomic DNA. Recombinant host cells expressing transcript/cDNA and genomic assaying compounds that stimulate or inhibit HK function. Nucleic acids of the invention are also useful for preducing transgenic animals. Experimental data indicates that kinase proteins of the present invention are expressed in humans in the eye (retinoblastomas) and brain. The current sequence represents the amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        wel peptide designated as human kinase useful as target for diagnosing disease or predisposition to the disease mediated by the peptide.

The present invention relates to an isolated human kinase polypeptide

(PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is

useful for diagnosing, treating and preventing cancer (e.g., leukaemia,
lymphoma, melannoma), an immune disorder (e.g., acquired immunodeficiency
syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's

disease, rheumatoid arthritis, psoriasis, Cushing's syndrome), a

cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial

cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial

infarction), and a lipid disorder (e.g., fatty liver, cholestasis,

Gaucher's disease, Niemann-Pick's disease). PKIN is useful in a number of

drug screening techniques and to analyse the proteome of a tissue or cell

type. PKIN is useful for creating knockin humanised animals or transgenic

animals to model human diseases, in somatic or germline gene therapy, to

generate a transcript image of a tissue or cell type, for detecting

differences in the chromosomal location due to translocation, inversion,

cycle probes for mapping naturally occurring genomic sequences. PKIN is useful

conthern or northern analysis, dot blot or other membrane-based

chechnologies, in PCR technologies, in dipstick, pin, multiformat enzyme

linked immunosorbent (ELISA)-like assays and in microarrays utilising

cycles for mapping naturally occurring denomic sequences. PKIN is expression. The
                                                                                                                                                                                                                                                                                                New human kinase polypeptide, useful in diagnosis, prevention and treatment of cancer, immune disorder, growth and developmental disorder, cardiovascular disorder and lipid disorder.

comparison of the mucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a stray, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that completes its activity is useful for preparing a medicament for treating pain and a pharmaceutical composition (e.g. spinal segmental nerve injury (CMI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising ne nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a ckit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polynetides or manimal of one or more of the polypeptides or their antibodies. The polynucleotide or more control or polynucleotides or their antibodies. The polynucleotide or more conformed to manimal end a pharmaceutical composition compound useful in treating pain and a pharmaceutical composition comprising the one or more conformation and spared nerve injury (Chung), chronic constriction injury (Ctl) and spared nerve injury (SNI) in an animal end or this patent did not form part of the printed the sequence data for this patent did not form part of the printed to the sequence data for this patent did not form part of the printed the patent of the printed the sequence data for this patent did not form part of the printed the sequence data for this patent did not form part of the printed the printed the printed to the control or the control or the control or the control or the control or the control or the control or the control or the control or the control or the control or the control or the contro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated polymucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-ABZ1066) or their mature procein coding portion, active domain coding protein or complementary sequences. The polymucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABE68902-ABP69849) are useful as molecular weight maging, screening and diagnostic assays and for treating cellimaging, screening and diagnostic assays and for treating cellimaging, screening and diagnostic assays and for treating cellimaging, screening and diagnostic and for the scleens; or Alzheimer's diseases (multiple sclerosis, contacted as diseases, multiple sclerosis, diabetes, lupus) genetic disorders, wound, burns, incision, ulcers, liver the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                      cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, athereosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABU65041-ABU65218 represent the NOVX polypeptides encoded by

```
ANU03501-AAU03557 represent novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polymucleotides conciding protein kinases and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with imperopriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoietic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disease (e.g. schizophrenia), neurodegenerative disorders (e.g. dispetes), and reproductive disorders (e.g. infertility).

Additionally, polymucleotides encoding protein kinases may be used for gene therapy and as DNA probbes in disapnostic assays. The protein kinase polypeptides may be used as antiquens in the production of antibodies against the protein kinases and in assays to identify modulators of protein kinase expression and activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diagnosing and/or treating e.g. cancer, immune, cardiovascular and neuronal-associated diseases, and microbial infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MEGGPAVCCODPRAELVERVAAIDVTHLEEADGGPEPTRNGVDPPPRARAASVIPGSTSR

The invention relates to novel human kinase proteins (PKIN) and nucleic acid molecules encoding them. PKIN is useful for identifying compounds that modulates its activity. PKIN cDNA is useful for assessing toxicity of a test compound. PKIN and its CDNA are useful for diagnosis, prevention and treatment of immune disorders such as acquired immune deficiency syndrome (AIDS), Addison's disease, anaemia, adult respiratory defisitess syndrome, allergies, amyloidosis, psoriasis, autoimmune haemolytic anaemia, autoimmune thyroiditis, molitiple sclerosis, asthma, osteoarthritis, osteoporosis, rheumatoid arthritis, ulcerative colitis and diabetes mellitus; growth and developmental disorders such as actinic keratosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease (MCTD), and myelofibrosis; cancers such as adenocarcinoma and leukaemia, cardiovascular diseases such as adenocarcinoma on hypertension; and lipid disorders such as fatty liver and cholestasis. PKIN cDNA is useful to detect upstream sequences such as promoters and regulatory elements, for creating knock in or knock out in humanised animals or transgenic animals to model human disease and for somatic or germaine gene therapy for treating the above mentioned disorders. The present sequence is human kinase (PKIN)-2

AAU79458 standard; protein; 561 AA. 15-JUL-2002 (first entry) Human novel kinase 16002. AAU79458; RESULT 9 AAU79458 RXHXRX

New human transferase protein for diagnosing and treating disorders e.g. cancer, Alzheimer's disease, anorexia, diabetes and to identify modulators for therapeutic use. carcinoma; tumour; adenocarcinoma; heematopoietic neoplastic disorder; leukaemia; lymphoma; brain disorder; cerebral ischaemia; infection; meningitis; brain abscess; acquire immunodeficiency syndrome; obesity; AIDS-related myopathy; prion disease; Alzheimer's disease; diabetes; Parkinson's disease; Huntington's disease; motor neurone disease; metabolic disorder; anorexia nervosa; pain; inflammation; ischaemia; irritable bowel syndrome; hart disorder; myocardial infarction; blood vessel disorder; atherosclerosis; bone metabolism disorder; cancer; enzyme; 16002; kinase; cellular proliferative disorder; osteoporosis; haematopoietic disorder; arthritis. Meyers RA, Silos-Santiago I; 03-AUG-2001; 2001WO-US024601. 01-SEP-2000; 2000US-0229299P. (MILL-) MILLENNIUM PHARM INC. WPI; 2002-351781/38. N-PSDB; ABK49563 WO200220800-A2 Homo sapiens 14-MAR-2002

Claim 4; Fig 16; 143pp; English.

The invention relates to an isolated human kinase polypeptide encoded by the DNAs designated 16658, 14223 and 16002 included are a host call comprising the DnAs designated 16658, 14223 and 16002 included are a host call comprise to the DNA, an antibody which selectively binds to the novel kinase, a mathod for producing the novel kinase comprising culturing the host call and recovering the sample with a compound which selectively hydridises to the DNA and determining whether the compound has bound and determining whether the compound has bound and determining whether the compound has bound to and/or modulate the protein comprising contacting the protein with a test compound and determining whether the compound has bound to and/or modulated the function of the protein (the modulators may be a small molecule, a peptide, a protein and antibody or a fragment of the full length protein).

The nucleic acids, proteins, identified modulators and antibodies are useful in the diagnosis, monitoring and treatment of a wide range of diseases and disorders (many examples of which are listed in the specification) including callular proliferative disorders (e.g. cancers of the lung and breast, carcinomas, tunnurs, adenocarcinomas, brain and nerve tissue disorders (e.g. carebral ischaemia, infections such as meningitis, brain abscress, acquired immunodeficiency syndrome (AIDS) - crelated myopathy, prion diseases, and motor neurone disease) metabolic calsorders (e.g. associated with infection, inflammation ischaemia, irritable bowel casorders (e.g. associated with infection, inflammation ischaemia, irritable bowel casorders (e.g. atherosclerosis), disorders of bone metabolism (e.g. atherosclerosis) disorders of bone metabolism (e.g. acceporosis) and haemacopoletic disorders of bone metabolism (e.g. atherosclerosis) disorders of bone metabolism (e.g. atherosclerosis) disorders of bone metabolism (e.g. atherosclerosis) disorders of bone metabolism (e.g. atherosclerosis) disorders of bone metabolism (e.g. atherosclerosis) disorders

This invention describes novel human NOVX polypeptides which have cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (, Anderson D;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                 This invention describes novel human NOVX polypeptides which have cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomypeathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine.

The invention relates to an isolated peptide designated human kinase

(HK), that has homology to members of the calcium/calmodulin-dependent
protein kinase kinase subfamily. The mechanism of action of the protein

of the invention is that of a kinase modulator. The human kinase of the

continuous a useful for creating a pharmaceutical composition for

treating a disease or condition mediated by the human kinase. HK is also

useful to provide a target for diagnosing a disease or predisposition to

disease mediated by HK, and is also useful in pharmacogenic analysis. HK

is useful for treating a disorder characterised by absence of

inappropriate or unwanted expression of HK, also as an immunogen to raise

nutbodies by administering HK to a mammalian organism e.g. rat. rabbit

or mouse. Nucleic acide of the invention are useful as hybridisation

probes for mRNA, transcript/cDNA and genomic DNA. Recombinant host cells

expressing a native HK are useful for assaying compounds that stimulate

or inhibit HK function. Nucleic acide of the invention are also useful

for producing transgenic animals. Experimental data indicates that kinase

proteins of the present invention are expressed in humans in the eye

creating sequence related to to kinase protein of the invention, appearing as

caid sequence related to to kinase protein of the invention, appearing as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 LLPARPSLSARKLSLQERPAGSYLEAQAGPYATGPASHISPRAWRRPTIESHHVAISDAE 120

The invention discloses a composition comprising two or more isolated rat or the invention discloses or a polymucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector; a method for identifying a mucleotide sequence which is differentially regulated in an animal subjected to pain and a ckit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in a mainal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the compound or small molecule that regulates the cativity in an animal of one or more of the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             420
pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                         ò
                                                                                                                                                                           ð
                                                                                                                                                                                                                                                                                         The invention discloses a composition comprising two or more isolated rat or human polymuclectides or a polymuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymuclectide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the cutivity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating complaints in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating complaints its activity is useful for preparing a medicament for treating collypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating collypeptides or their antibodies. The polymucleotide or the compound that injury (CCI) and spared nerve injury (SNI) in an animal (e.g. spin) ed.g. spin (e.g. spin) and pared nerve injury (SNI) in an animal (e.g. spin) ed.g. spin (e.g. spin) sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: the sequence data for this patent did not form part of the print of the protein (or the protein in the sequence of the sequence date for this patent did not form attrict form with the sequence da
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

CDNA obtained from Instructure of 640521 of BRSTNOT03 library. It is expressed in reproductive, nervous and developmental tissues and is found to be homologous to Ca2+fcalmodulin-dependent protein kinase kinase. Fragments of CSIGP encoding nucleic acid can be used as hybridisation probe for detecting CSIGP related sequences or allelic variants. Recombinant CSIGP can be produced in host cells by transforming them with probe for detecting CSIGP related sequences or allelic variants. Recombinant CSIGP can be produced in host cells by transforming them with the treatment of cell proliferative and inflammatory disorders associated with decreased or increased CSIGP expression. CSIGP is used in the diagnosis, prevention and treatment of cell proliferative disorders like arteriosclerosis, cirrhosis, cancer, hepatitis and inflammatory disorders like AIDS, Addison's disease, multiple sclerosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 115
